

Nanoscience at OSA 2024-2025 Instructor: Dr. Steve Yoshinaga Thursdays 9 - 10:30 am In-person class with labs

This science series is designed to engage middle school students in the joys of chemistry

and biology. The course will review 5th - 8th grade California chemistry and biology standards in a fun and interactive way that is bound to leave students with a lifelong appreciation of the sciences. The class will reveal insights and connections with real life as chemistry and biology is all around us and within us. Most students who take this class will look forward to high school science. This series of 32

molecular science classes include the following sessions: Shapes of Nature, Chemistry "R" Us Part 1, Chemistry "R" Us Part 2, and the Biological World. The classes in this series are equal parts lectures, videos, hands-on experiments, and discussion. Limited to 12 middle school-aged students.

Materials Needed:

Home computer and/or internet access (such as at a public library); one spiral notebook, with pockets, for notes, handouts, completed problems and independent assignments.

Expectations:

Students are expected to be quietly attentive during presentations and videos. Note taking is encouraged. During group and individual activities, the student is expected to listen carefully to

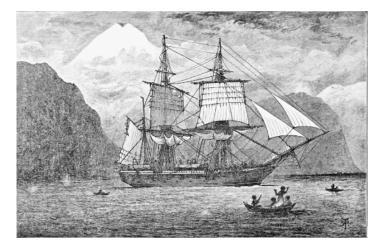

instructions before engaging in the activity. Links to

instructional videos will be provided for home activities.

Syllabus:

Each 1.5-hour class will consist of direct instruction, group, and independent activities. Classes will include lecture, videos, demonstrations, worksheets, and hands-on activities.

There is an annual \$100 lab fee due at the beginning of the year.

HMS Beagle: Find out why it is one of the most famous ships in history

Tentative Schedule 2024-2025

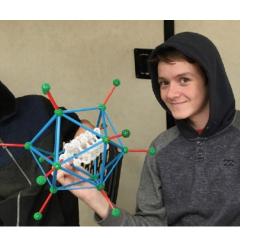

Session 1 - 7 weeks Shapes of Nature

- 8/29 3-D Shapes and Tops
- 9/5 Magnetic Worlds and Molecules
- 9/12 The Molecule Game
- 9/19 Diamonds, Graphite, and Buckyballs
- 9/26 DNA Models
- 10/3 Viruses
- 10/10 Hydrocarbons-Molecule Game

Session 2 - 8 weeks Chemistry R Us Part 1

- 10/24 Chemistry and You
- 10/31 Protons, Neutrons, and Electrons, oh my!
- 11/7 Biotechnology: Tools of the Trade
- 11/14 Periodic Table of the Elements
- 11/21 In a State of Matter
- 12/5 Metals are Shiny
- 12/12 Chemical Reactions
- 12/19 Acids and Bases

		<u>Sessior</u>	<u>1 3 - 9 weeks</u>	Chem R Us Part	2
1	Strong Acid	1/16	lťs a Gas		
2		1/23	Crystals		
	Weak Acid	ak Acid 1/30 Microscope Lab: Crystals			
		2/6 Light and the Electromagnetic Sp			
	Neutral (water)	2/13	Radioactivity: Alchemy R Us		
		2/20	Biotechnology Lab	-	
_	Weak Base	2/27	Polymers R Us		
12 13 14	Strong Base	3/6	Cycles on Planet E	arth	
		3/13	Photosynthesis and		

Session 4 - 8 weeks Biological World

- 4/3 The Cell
- 4/10 Central Dogma of Molecular Biology
- 4/17 Breaking the Genetic Code
- 5/1 DNA Extraction Lab
- 5/8 Genetics
- 5/15 The Molecular Biology Revolution
- 5/22 Symbiosis
- 5/29 Evolution
